Findings & Design Improvement Report

Project Title

TaskFlow – Mobile Task Management Application

Findings

The usability testing showed that users were able to complete all assigned tasks successfully. The application was easy to navigate and the interface was simple to understand.

Positive Findings

- Simple and intuitive navigation.
 - Modern and clean user interface.
 - Easy task creation process.
 - Clear button placement.
 - Consistent screen layouts.
 - Users completed tasks without assistance.
-

Issues Identified

Although the prototype performed well, a few improvements were suggested.

- No confirmation message after saving a task.
 - Reminder feature could be more visible.
 - Search option is not available.
 - Users wanted additional task filters.
 - Profile section could include more settings.
-

Design Improvement Suggestions

1. Add Confirmation Messages

Display a success message after saving a task to reassure users that the action was completed.

2. Improve Reminder Feature

Make reminder settings easier to find and allow users to customize reminder times.

3. Add Search Functionality

Include a search bar so users can quickly find specific tasks.

4. Add Task Filters

Allow users to filter tasks by:

- Priority
 - Due Date
 - Category
 - Completion Status
-

5. Improve Profile Section

Provide options such as:

- Edit Profile
 - Notification Settings
 - Theme Preferences
 - Account Management
-

Recommendations

For future versions of TaskFlow, the following improvements are recommended:

- Add push notifications for reminders.
- Enable task synchronization across devices.
- Support recurring tasks.

- Include dark mode.
- Improve accessibility with larger touch targets and better screen reader support.

Conclusion

The usability testing demonstrated that the TaskFlow prototype is easy to use and provides a smooth user experience. The suggested improvements focus on adding useful features and refining the interface while maintaining its simplicity. These enhancements will further improve usability and user satisfaction in future versions.
