

Usability Test Plan

Project Title

TaskFlow – Mobile Task Management Application

Objective

The objective of this usability test is to evaluate how easily users can navigate the TaskFlow application and complete common tasks. The testing aims to identify usability issues and gather feedback for future improvements.

Product Description

TaskFlow is a mobile task management application that helps users organize daily tasks, set priorities, and keep track of completed work through a simple and user-friendly interface.

Target Users

The usability test is intended for:

- College students
 - Working professionals
 - Anyone who wants to manage daily tasks
-

Test Participants

A total of **3 participants** will take part in the usability testing.

Test Environment

- Mobile Application Prototype
 - Interactive prototype created using Google Stitch
 - Mobile device or browser for testing
 - Quiet environment with no distractions
-

Test Scenarios

Participants will be asked to complete the following tasks:

Scenario 1

Open the TaskFlow application.

Scenario 2

Login using the provided credentials.

Scenario 3

View today's tasks on the Home screen.

Scenario 4

Add a new task with a title, due date, and priority.

Scenario 5

Save the newly created task.

Scenario 6

Open the Completed Tasks screen.

Scenario 7

Return to the Home screen.

Data to be Collected

During the testing session, the following information will be recorded:

- Time taken to complete each task
- Number of errors made
- Navigation difficulties
- User comments and suggestions
- Overall satisfaction with the application

Success Criteria

The usability test will be considered successful if:

- Users complete all assigned tasks.

- Users navigate the application without major confusion.
 - Users find the interface easy to understand.
 - Users are satisfied with the overall experience.
-

Evaluation Method

The prototype will be observed while participants perform each task. Notes will be taken regarding navigation, task completion, user behavior, and any difficulties encountered. At the end of the session, participants will provide verbal feedback about their experience.

Expected Outcome

The usability testing will help identify areas where the interface can be improved. The collected feedback will be used to enhance navigation, usability, and the overall user experience in future versions of the application.
