User Feedback & Observations

Project Title

TaskFlow – Mobile Task Management Application

Participants

The usability testing was conducted with **3 participants**.

Observation Summary

The participants were asked to complete common tasks using the TaskFlow prototype while their interactions were observed.

Task Completion

Task	Result
Open the application	Completed Successfully
Login	Completed Successfully
View Home Screen	Completed Successfully
Add a New Task	Completed Successfully
Save the Task	Completed Successfully
View Completed Tasks	Completed Successfully
Return to Home Screen	Completed Successfully

User Feedback

Participant 1

- The application was easy to navigate.

- The buttons were clearly visible.
 - Adding a task was simple and quick.
-

Participant 2

- The interface looked clean and modern.
 - Navigation between screens was smooth.
 - Suggested adding a confirmation message after saving a task.
-

Participant 3

- The application was easy to understand.
 - Task categories were helpful.
 - Suggested adding reminder notifications in future versions.
-

Observations

During testing, the following observations were recorded:

- Users quickly understood the navigation.
 - All participants completed the assigned tasks without assistance.
 - Users easily located important buttons.
 - The interface was visually clean and organized.
 - No major usability issues were observed.
-

Overall Feedback

The participants found the prototype user-friendly and easy to use. They appreciated the simple layout and smooth navigation. Some additional features were suggested for future improvements, such as reminder notifications and task search.

Conclusion

The usability testing showed that the prototype provides a positive user experience. Minor improvements can further enhance usability in future versions.
